

# JAMSHID SOURATI

Address: 1155 East 60th Street, Chicago, IL 60637

Contact:(617) 480-8337 ◊ [jsourati@uchicago.edu](mailto:jsourati@uchicago.edu)

Homepage: [jsourati.github.io](http://jsourati.github.io)

## ACADEMIC APPOINTMENTS

---

**University of Chicago**, Chicago IL

*November 2019 - Present*

Post-doctoral Researcher in the Department of Sociology, Knowledge Lab

**Boston Children's Hospital, Harvard Medical School**, Boston MA

*June 2017 - October 2019*

Post-doctoral Research Fellow in Radiology Department, Computational Radiology Laboratory

## EDUCATION

---

**Northeastern University**, Boston MA

*January 2011 - December 2016*

Ph.D. in Electrical & Computer Engineering Department

• Received Dissertation Completion Fellowship (DCF) award for Fall 2016 from Northeastern University

**Sharif Institute of Technology**, Tehran, Iran

*September 2006 - September 2010*

B.Sc. in Electrical Engineering Department

## RESEARCH INTEREST

---

Science of Science, Computational Social Science, Machine Learning, Active Learning, Data Science

## RESEARCH EXPERIENCE

---

**Social Analysis of Scientific Knowledge Discovery**

*Nov 2019 - Present*

*University of Chicago*

- Incorporating authors as well as contents of the past publications to develop least- and most-human artificial intelligence algorithms for modeling dynamics of scientific discoveries
- Our model is able take part in accelerating science advancement in two ways
- (1) Predicting discoveries that will take place in decades twice as precisely as the purely content-based algorithms (most-human AI)
- (2) Generating promising hypotheses and discovery candidates that are very unlikely to be imagined by the scientists without AI intervention (least-human AI)

**Generic Active Learning (AL) Methods**

*January 2012 - May 2017*

*Northeastern University*

- Developing unsupervised AL with pairwise constraints for spectral clustering, enabling AL-accelerated large image segmentation with naive features
- Addressing practical shortcomings of uncertainty sampling with more sophisticated information theoretical criteria:
- Deriving a novel theoretical relationship between Fisher Information Ratio (FIR) and the expected asymptotic variance of the maximum-likelihood estimator justifying usage of FIR-based AL for supervised learning
- Developing an efficient AL algorithm based on optimistic/pessimistic approximations of mutual information (MI) and using submodular properties of this information metric

**Active Learning for Deep Models**

*June 2017 - Sep 2019*

*Boston Children's Hospital, Harvard Medical School*

- Applying a tailored version of FIR-based AL with Fully Convolutional Neural Networks (FCNNs) for semantic image segmentation
- Successfully implementing and testing our method for brain extraction of data sets that lack enough annotations. Our model achieved high segmentation accuracy with significantly smaller annotation cost in comparison to various types of uncertainty sampling.

---

## COMMUNITY ACTIVITIES

- **Reviewing** submissions in Conference on Neural Information Processing Systems (NeurIPS), 2019.
- **Program committee member** in International Conference on Machine Learning (ICML), 2018.
- **Program committee member** in IEEE Machine Learning in Signal Processing Conference (MLSP), 2015.
- **Reviewing** submissions in International Conference on Medical Image Computing and Computer Assisted Intervention (MICCAI), 2018.
- **Reviewing** submissions in IEEE Transactions on Image Processing, IEEE Transactions on Medical Imaging.

---

## SKILLS

<b>Computer Languages</b>	Python, MySQL, MATLAB, <i>familiar with</i> : bash shell scripting, Spark, R
<b>Tools and Libraries</b>	PyMySQL, TensorFlow, scikit-learn, GraphFrames, PySpark, CVXPY, CVXOPT, L <sup>A</sup> T <sub>E</sub> X, Git, Emacs, Anaconda, Sphinx, Jupyter, PGF/TikZ
